                                                predominant isoform during puff st
constant in late larvae until the
increase during 86-94 hours of development and represent the predominant isoform during puff stage 1. Levels remain relatively constant in late larvae until the premetamorphic pulse of ecdysone. Transcripts are detected again from puff stages 12-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cible gene that encodes two ets-related proteins.";

-!- TISSUE SPECIFICITY: UBIQUITOUSLY EXCRESSED IN THE EMBRYO.
-!- SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY
TRANSCRIPTION FACTORS. HIGHEST TO HIF-1, ALPHA.
-!- SIMILARITY: Contains 2 PAS (PER-ARNT-SIM) dimerization domains.
-!- SIMILARITY: Contains 1 PAS-associated C-terminal (PAC) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.
